IN THE CLAIMS:

Please amend claims 1, 4, 9 and 14 as follows:

1. (Twice Amended) A frame for a sporting device for coupling to a shoe which frame comprises an upper sub-frame having a first rigid link with means for coupling to [a] the shoe to be worn by a user, a lower sub-frame having a second rigid link which is coupled via [a pivot mechanism] pivoting and translating coupling means to said [upper sub-frame] first rigid link for pivoting and translating in a main plane and [which is provided with or adapted to be provided with a runner or wheels] upon which wheels or runners may be secured, and resetting spring means for urging both sub-frames toward each other; wherein the sub-frames are mutually pivotable and translatable in the said main plane along a predetermined path fixed by the coupling means.

4. (Twice Amended) The frame as claimed in claim 3, wherein the frame [has a pole path] moves in accordance with the predetermined path fixed by the coupling means.

9. (Twice Amended) The frame as claimed in claim 4, wherein a frame is a member of the family in accordance with one of the configurations from the table below, in which the first number designates the number of [(optionally theoretical)] rods, p1 designates the number of connections with one degree of freedom, p2 designates the number of connections with two degrees

of freedom and # designates the presence of a well-defined pole path and therewith the suitability for a sporting device with foot bending:

14. (Amended) [The frame as claimed in claim 1,] A

frame for a sporting device for coupling to a shoe which frame comprises an upper sub-frame with means for coupling to the shoe to be worn by a user, a lower sub-frame which is coupled via a
